Specification

1. The disclosure is objected to because of the following informalities: on page 8, line 15, numeral "61" is not shown in the drawings. Further, on line 16, numeral 63 is referencing a channel and not the O-ring as there are two O-rings designated by numeral "62" in Figure 3. On page 10, line 4, it appears "Firs" should be "First".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Paulsen et al.

Paulsen et al. shows a pump body 46 (and its associated structure), output member 42, 50; pump manifold 11; input port 15; output port 19; first means defining a first chamber 22; second means defining a second chamber 21; the first and second chambers defining a closed reservoir; shuttle valve 28; fill/dispense actuators 16, 50, 45 and the pressure exerted on the handle; and the output member 50 is not in sealing contact with the first chamber as seen in Figure 2.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Berndorfer et al. shows a shuttle type dispenser.
